IBM Case Foundation 5.2.1: Migrating & Deploying Applications

Kód kurzu: F237G

This course trains the skills that are needed to deploy FileNet workflow applications from one environment to another. If you are enrolling in a Self Paced Virtual Classroom or Web Based Training course, before you enroll, please review the Self-Paced Virtual Classes and Web-Based Training Classes on our Terms and Conditions page, as well as the system requirements, to ensure that your system meets the minimum requirements for this course

Pro koho je kurz určen

- Workflow System Administrator responsible for deploying the workflow application into other environments, for example Quality Assurance testing or Production.
- Workflow Author responsible for developing FileNet workflow applications who needs to package the application in preparation for deployment to other environments.
- Anyone who needs to deploy FileNet workflow applications from one environment to another.

Co Vás naučíme

Understand the process of moving FileNet Workflow applications.

Prepare for workflow application deployment.

Export the application assets or extract the application assets from an application package.

Analyze the impact of the deployment on the destination environment.

Import the application assets and complete the application deployment.

Use the FileNet Deployment Manager command line interface.

Požadované vstupní znalosti

Prior knowledge that is required:

- Basic knowledge of organization's business process applications.
- Basic knowledge of database technology.
- PCs, networks, and their organization's server operating systems at the expert level
- Prerequisite courses:
- F115G IBM FileNet Content Manager 5.2: Implementation and Administration
- F230G IBM Case Foundation 5.2.1: Introduction
- F231G IBM Case Foundation 5.2.1: Configure the workflow system
- F232G IBM Case Foundation 5.2.1: Workflow security

Osnova kurzu

How to move FileNet workflow applications

Elements of a FileNet workflow application

Understand the migration and deployment process

What are the deployment phases?

What tools are used for application deployment?

Prepare for application deployment

Assemble deployment instructions.

Identify the FileNet application artifacts and assets.

Verify source and destination environment compatibility.

Export the application assets

IBM Case Foundation 5.2.1: Migrating & Deploying Applications

Export FileNet P8 domain assets

Create or update export manifest

Export assets to a deployment dataset

Extract the source environment half maps

Create a deployment package

Export other IBM and external assets

Export user interface assets

Convert and analyze the FileNet P8 assets

Prepare the destination environment

Extract the destination environment half maps

Create a source-destination pair definition

Create the conversion data maps

Converting assets for import

Perform a change impact analysis

Import the application assets

Import pre-requisite assets

Import FileNet P8 assets

Import non-FileNet P8 assets

Use the FDM command line interface

Introduction to the command line interface

Deployment operations

Appendix

Solutions to Exercises.

Start and Stop System Components.
