

Red Hat Certified OpenShift Application Developer

Kód kurzu: EX288

The Red Hat Certified Specialist in OpenShift Application Development exam (EX288) tests your ability to deploy existing applications in a Red Hat® OpenShift® Container Platform environment. By passing this exam, you become a Red Hat Certified Specialist in OpenShift Application Development, which also counts toward becoming a Red Hat Certified Architect (RHCA®). Objectives listed for this exam are based on the most recent Red Hat product version available.

Pro koho je zkouška určena

- Application developers in a DevOps role who are responsible for managing a Red Hat OpenShift Container Platform Kubernetes environment
- Application developers in a DevOps role who are responsible for implementing a Red Hat OpenShift Container Platform Kubernetes environment
- Application developers who are responsible for creating containerized applications or converting existing applications into containerized applications
- Site reliability engineers

Study points for the exam

To help you prepare, the exam objectives highlight the task areas you can expect to see covered in the exam. Red Hat reserves the right to add, modify, and remove exam objectives. Such changes will be made public in advance.

As part of this exam, you should be able to perform these tasks:

Work with Red Hat OpenShift Container Platform

- Create and work with multiple OpenShift projects
- Deploy single container and multi-container applications
- Create and use a Helm chart
- Customize deployments with Kustomize
- Implement application health monitoring
- Understand basic Git usage and work with Git in the context of deploying applications in OpenShift
- Configure the OpenShift internal registry to meet specific requirements
- Create and deploy cloud-native applications for OpenShift
- Manage applications with the web console

Deploy multi-container applications

- Create Helm charts
- Customizing deployments with Kustomize

Work with container images

- Use command line utilities to create and manipulate container images
- Optimize container images
- Publish container images to a registry

Red Hat Certified OpenShift Application Developer

Troubleshoot application deployment issues

- Diagnose and correct minor issues with application deployment

Work with image streams

- Create custom image streams to deploy applications
- Pull applications from existing Git repositories
- Debug minor issues with application deployment

Work with configuration maps

- Create configuration maps
- Use configuration maps to inject data into applications

Work with the source-to-image (S2I) tool

- Deploy applications using S2I
- Customize existing S2I builder images

Work with hooks and triggers

- Create a hook that runs a provided script
- Test and confirm proper operation of the hook
- Manage and trigger application builds

Work with templates

- Create an OpenShift template
- Use pre-existing templates written in either JSON or YAML format
- Work with multi-container templates
- Add custom parameters to a template

During the exam you may be required to work with one or more pre-written applications. You will not be required to modify application code however in some cases you may need to utilize supplied documentation in order to fully test and complete the deployment of a given application.

What you need to know

Red Hat encourages all candidates for the Red Hat Certified Specialist in OpenShift Application Development exam (EX288) to consider taking the Red Hat OpenShift Application Development I: Containerizing Applications (DO288) course to help prepare. Attendance in these classes is not required; students can choose to take just the exam. While attending Red Hat classes can be an important part of one's preparation to take this exam, attending class does not guarantee success on the exam. Previous experience, practice, and native aptitude are also important determinants of success.

Many books and other resources on system administration for Red Hat's products are available. Red Hat does not officially endorse any as preparation guides for its exam. Nevertheless, you may find additional reading deepens understanding and can prove helpful.

Exam format

This exam consists of a single section lasting three hours. The exam is a performance-based evaluation of your ability to deploy applications in a Red Hat® OpenShift Container Platform environment. You will perform a number of routine tasks similar to those you would be expected to perform in a normal DevOps environment and will be evaluated on whether you have met specific objective criteria.

This exam can also be taken virtually as part of our remote testing format. Find out more about remote exams to see if this is the right choice for you.
